The HYTORC WASHER™ is a perfect solution for heavy vibration applications.

The award-winning ASME approved hardened washer, the HYTORC Washer™, eliminates the usual side load and stops the bolt from turning. The HYTORC Washer™ was engineered to operate with a standard torque tool and a washer drive for hands-free safe operation from a distance even on inverted applications. Backup wrenches are no longer required. The installation becomes safer, less crowded and bolting time is reduced in excess of 50% over any other method.

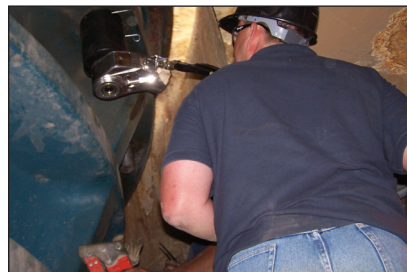

The HYTORC Washer's counter nut effect prevents it from loosening and potentially damaging expensive mining equipment.
